

Services to the Mining, Mineralogical and Metallurgical Industries

McVehil-Monnett Associates, Inc. (MMA) has been a recognized leader providing air quality and meteorological consulting services to the mining, mineralogical and metallurgical processing industries since its inception in 1984. Mining and processing sectors served include coal, base and precious metals, sand and gravel/aggregates, molybdenum, uranium, limestone and others.

MMA's services to the mining industry include air quality permitting, modeling, monitoring, compliance assistance and emission factor development for fugitive dust sources. We have extensive experience in fugitive dust analyses and control plans, as well as control technology evaluations. MMA assists clients with development and implementation of monitoring programs, and provides air modeling studies as required for permit applications, compliance issues, environmental impact statements and environmental assessments.

In addition to our work for domestic operations, MMA has provided environmental support to dozens of international project locations ranging from South America to Central Asia. Services include air quality and meteorological monitoring, multimedia regulatory analysis, and impact assessments in support of financing documents. International experience includes baseline and compliance monitoring for major copper, zinc and gold projects in Peru, air quality modeling for two major copper operations in Chile, and both monitoring and impact assessment activities for a copper smelter in the Peruvian Andes.

We would like the opportunity to talk to you about our services or to discuss a particular problem you may have. Please call us at (303) 790-1332.
