

Air Quality Permitting Services

McVehil-Monnett Associates, Inc. (MMA) specializes in providing comprehensive air quality permitting and compliance services. MMA offers clients a broad range of services, ranging from minor source permitting to complex permitting of major sources and modifications in both attainment (PSD) and non-attainment (NSR) areas. Equally important, MMA develops practical, cost-effective compliance plans, and negotiates flexible operating permit conditions to best ensure continued compliance with complex and ever-changing air quality rules and regulations.

MMA has extensive experience in the development of control technology demonstrations in support of permitting activities, including Best Available Control Technology (BACT) analyses, Maximum Achievable Control Technology (MACT) determinations and Lowest Achievable Emission Rate (LAER) demonstrations in support of major source permitting programs. MMA also provides assistance in the development of periodic and parametric monitoring methods as well as Compliance Assurance Monitoring (CAM) in support of Title V compliance plans and certifications.

MMA's experience stretches from coast to coast and also includes extensive experience internationally. Our client base includes natural gas transportation and processing; fuel enhancement and conversion facilities; fossil-fuel power generation, cogeneration and peaking facilities; coal, metallic and non-metallic mineral mines and processing plants; and a variety of manufacturing facilities. Our staff has the specific permitting experience and expertise necessary to ensure our clients receive professional, cost-effective service.

We would like the opportunity to talk to you about our services or to discuss a particular problem you may have. Please call us at (303) 790-1332.
